Jtech's Bistro Paging Systems are the premium systems available. They have been developed to increase communication between venue's and their customers. The Systems will:

- * Eliminate noise pollution caused from overhead paging systems,
- * Eliminate the use of numbered light boards
- * Eliminate excessive wage & labour costs associated with food runners & waiters
- * Eliminate cold food & customer complaints

Customers are more relaxed, and happier as they now know exactly when their food is ready. Your customers no longer have to wait for their number to be called on the overhead paging system or displayed on a light board, which are so often not seen or heard.

No more unsatisfied customers who miss their number or their page, resulting in cold food and customer complaints. Your customers can now use the other facilities your venue has to offer without having to wait around the bistro for the meal to be prepared because they now receive a personal page via the Jtech BistroPaging System.

No more crowded bistro lines or congested service area.

Compact charger that neatly stores away

COMMPASS Charger Benefits

- * Space-Saving Charger Tower Design Supports up to 20 CommPass Pagers in a Minimum of Space
